

## CCNA® Overview

Cisco Certified Network Associate (CCNA®) validates the ability to install, configure, operate, and troubleshoot medium-size route and switched networks, including implementation and verification of connections to remote sites in a WAN. CCNA curriculum includes basic mitigation of security threats, introduction to wireless networking concepts and terminology, and performance-based skills. This new curriculum also includes (but is not limited to) the use of these protocols: IP, Enhanced Interior Gateway Routing Protocol (EIGRP), WAN Protocols, Routing Information Protocol Version 2 (RIPv2), VLANs, Ethernet, access control lists (ACLs).

## Why study CCNA®?

CCNA certification is a second-level [Cisco Career certification](#) that indicates a foundation in apprentice knowledge of networking. CCNA certification validates the ability to install, configure, operate, and troubleshoot medium-size routed and switched [networks](#), including testing and verification of connections to remote sites in a WAN and Wireless theory.
